DAS LIQUID CRYSTAL DISPLAY KEYPAD

The DAS Liquid Crystal Display (LCD) Keypad can be used to operate your DAS Security Control with virtually the same steps described in your Operator's Manual. With this more powerful and versatile LCD keypad, additional features are available and are accessed with the four special function keys on the left side of the number keys. These keys, labeled [A], [B], [C], and [D], are described below:

[A] KEY: The [A] key serves as a "Help" key. It only functions when the LCD display shows the message, "TYPE A FOR HELP". Multiple messages will be displayed in sequence every 3 seconds, or will scroll with no delay each time the [A] key is pressed.

[B] KEY: The [B] key adjusts the brightness of the LCD backlighting to levels 1-6, with 6 as the brightest. The factory setting is 6. To turn off only the key backlighting, press [B][7]. To turn off only the LCD backlighting, press [B][8]. To turn off only the "ARMED", "SECURE", and "POWER" lights, press [B][9]. To turn off all lighting, press [B][0]. All lights will return to the "ON" mode when the [#] key is pressed, or when an alarm condition, a fire or trouble condition, or a pre-alarm occurs.

[C] KEY: The [C] key is used to quickly program auxiliary codes in the run mode. The display asks for User number, Master Code, and new Auxiliary Code before automatically programming this information into the Security Control. NOTE! This function can only be used when the DAS Security Control is disarmed.

[D] KEY: The [D] key adjusts the LCD screen viewing angle for various heights by pressing [D] and a number [1] through [7]. The lowest viewing angle is 7 and the highest is 1. The factory setting is 5. The [D] key also causes the LCD screen to display Alarm Memory when [D][0] is pressed. Faulted and/or isolated sectors from the last alarm event, are then displayed on the LCD screen.

NOTE! After pressing keys [B], [C], or [D], the display will revert back to the standard message if no additional keypresses are made within 10 seconds. To escape any of the special function modes and return to the standard message screen, press the [#] key.

Other keypad functions, including the dual keypress alarms work exactly like the standard keypad described in your Operator's Manual. If you have any questions about the operation of this keypad, or any other question in regard to your security system, you should call the company that installed the DAS Security Control in your home or business.
